The New Zachman Pear

The Zachman pear tree was originated here in our own nursery, and has undergone and successfully met with the most rigid test, comprising of 19 years through Minnesota, at Carterton, Canada and Fargo, No. Dakota. We watched these trees closely for eighteen years, and never observed any winter injury.

Mr. Tait, Carterton, Canada, writes: "You can fully recommend the Zachman pear tree to be hardy and blight resistant. The fruit is larger than anything I have in my trial ground of over fifty varieties. The fruit is of good quality, and has very little grit."

**LARGE, SMOOTH, EARLY
WITH GOOD COLOR**

Yes, our pear is the largest of the hardy pears, and is

equal in quality to the most of them. The tree is spreading in growth with large, healthy foliage. It blooms a week earlier than the Wealthy apple. The fruit is large, smooth and of regular pear shape. It colors when ripe to a light yellow with red cheek. The skin is rather thick, making it an excellent shipper. Flesh very tender and juicy without grit. The Zachman pear is an excellent eating and canning pear. Season, October. Keeps until December.

**PROFESSOR HANSON OF
SOUTH DAK., WRITES:**

"My opinion is that successful pear culture for home and market use is now possible for all South Dakota and Prairie Northwest, also for Southern Manitoba and Saskatchewan."
